# Employing `asremlPlus`, in conjunction with `asreml`, to calculate and use information criteria

Chris Brien

08 November, 2025

This vignette illustrates the facilities in `asremlPlus` (Brien, 2025), in conjunction with `asreml` (Butler et al., 2023), for calculating and using information. Here, `asremlPlus` and `asreml` are packages for the `R` Statistical Computing environment (R Core Team, 2025).

It is divided into the following main sections:

1. Set up the maximal model for this experiment
2. Obtaining information criteria for separate models
3. Obtaining information criteria for a prescribed sequence of model changes
4. Using information criteria to decide model changes

## 1. Set up the maximal model for this experiment

```
library(knitr)
opts_chunk$set("tidy" = FALSE, comment = NA)
suppressMessages(library(asreml, quietly=TRUE))
```

```
## Offline License checked out Sat Nov  8 00:37:57 2025
```

```
packageVersion("asreml")
```

```
## [1] '4.2.0.370'
```

```
suppressMessages(library(asremlPlus))
packageVersion("asremlPlus")
```

```
## [1] '4.4.55'
```

```
options(width = 100)
```

### Get data available in asremlPlus

The data are from a 1976 spring wheat experiment and are taken from Gilmour et al. (1995). An analysis is presented in the `asreml` manual by Butler et al. (2023, Section 7.6), although they suggest that it is a barley experiment.

```
data(Wheat.dat)
```

## Fit the maximal model

In the following a model is fitted that has the terms that would be included for a balanced lattice. In addition, a term WithinColPairs has been included to allow for extraneous variation arising between pairs of adjacent lanes. Also, separable ar1 residual autocorrelation has been included. This model represents the maximal anticipated model,

```
max.asr <- asreml(yield ~ WithinColPairs + Variety,
                  random = ~ Rep/(Row + Column) + units,
                  residual = ~ ar1(Row):ar1(Column),
                  data=Wheat.dat)
```

```
ASReml Version 4.2 08/11/2025 00:37:58
          LogLik        Sigma2     DF     wall
 1     -724.1213      23034.14    124   00:37:58

 6     -691.7892      46701.51    124   00:37:58  (  2 restrained)
 7     -691.8336      46208.51    124   00:37:58  (  1 restrained)
 8     -691.7749      47698.26    124   00:37:58
 9     -691.7711      47041.85    124   00:37:58

Warning in asreml(yield ~ WithinColPairs + Variety, random = ~Rep/(Row + : Some components changed
by more than 1% on the last iteration
```

The warning from `asreml` is probably due to a bound term.

## Initialize a testing sequence by loading the current fit into an asrtests object

```
max.asrt <- as.asrtests(max.asr, NULL, NULL)
```

## Check for and remove any boundary terms

```
max.asrt <- rmboundary(max.asrt)
summary(max.asrt$asreml.obj)$varcomp
```

```
                         component    std.error    z.ratio bound %ch
Rep:Row               4.293282e+03 3.199458e+03  1.3418779     P 0.0
Rep:Column            1.575689e+02 1.480357e+03  0.1064398     P 0.7

```

```
print(max.asrt, which = "testsummary")
```

```
####  Sequence of model investigations for yield

(If a row has NA for p but not denDF, DF and denDF relate to fixed and variance parameter numbers)

  terms DF denDF  p AIC BIC   action
1   Rep  1    NA NA  NA  NA Boundary
```

Rep has been removed because it has been constrained to zero. Following the recommendation of Littel et al. (2006, p. 150), the bound on all variance components is set to unconstrained (U) using `setvariances.asreml` so as to avoid bias in the estimate of the residual variance. Alternatively, one could move Rep to the fixed model.

## Unbind Rep, Row and Column components and reload into an asrtests object

```
max.asr <- setvarianceterms(max.asr$call,
                            terms = c("Rep", "Rep:Row", "Rep:Column"),
                            bounds = "U")
```

```

```

```
print(max.asrt, which = "testsummary")
```

```
####  Sequence of model investigations for yield

(If a row has NA for p but not denDF, DF and denDF relate to fixed and variance parameter numbers)

[1] terms  DF     denDF  p      AIC    BIC    action
<0 rows> (or 0-length row.names)
```

Now the Rep component estimate is negative.

The `test.summary` output shows that no changes have been made to the model loaded using `as.asrtests`. The pseudo-anova table shows that Varieties are highly significant ($p < 0.001$)

## 2. Obtaining information criteria for separate models

The method `infoCriteria` has two methods for calculating information criteria. One, `infoCriteria.asreml`, is a method for `asreml` objects and the other, `infoCriteria.list`, if for 'list`objects, the components of the`list`being`asreml' objects.

### Single models

Firstly, `infoCriteria` is called with the default `IClikelihood`, which is `REML`. Then it is called with `IClikelihood` set to `full` (Verbyla, 2019).

```
infoCriteria(max.asr)
```

```
  fixedDF varDF NBound     AIC      BIC  loglik
1       0     7      0 1396.34 1416.082 -691.17
```

```
infoCriteria(max.asr, IClikelihood = "full")
```

```
ASReml Version 4.2 08/11/2025 00:37:59
          LogLik        Sigma2     DF     wall
 1     -691.1700      46641.98    124   00:37:59
```

```
Warning in asreml(fixed = yield ~ WithinColPairs + Variety, random = ~Rep/(Row + : Log-likelihood
not converged
```

```
  fixedDF varDF NBound      AIC      BIC    loglik
1      26     7      0 1647.194 1746.545 -790.5968
```

## A list of models

Now, a second model, from which the `withinColPairs` term has been omitted, is fitted; to be consistent, the variance components are unconstrained using `setvariances.asreml`. Then the `asreml` objects for this model and the maximal model are combined into a `list` and a `data.frame` produced that includes their information criteria.

```
m1.asr <- asreml(yield ~ Variety,
                 random = ~ Rep/(Row + Column) + units,
                 residual = ~ ar1(Row):ar1(Column),
                 data=Wheat.dat)
```

```

```

```
mods <- list(max = max.asr, m1 = m1.asr)
ic <- infoCriteria(mods, IClikelihood = "full")
print(ic)
```

```
    fixedDF varDF NBound      AIC      BIC    loglik
max      26     7      0 1647.194 1746.545 -790.5968
m1       25     7      0 1645.326 1741.666 -790.6629
```

## 3. Obtaining information criteria for a prescribed sequence of model changes

The use of `changeTerms.asrtests` is demonstrated for a sequence of models, starting with the maximal model.

### Drop the term for within Column pairs (a post hoc factor)

```
current.asrt <- as.asrtests(max.asrt$asreml.obj, NULL, NULL,
                            label = "Maximal model", IClikelihood = "full")
```

```
Warning in asreml(fixed = yield ~ WithinColPairs + Variety, random = ~Rep/(Row + : Log-likelihood
not converged
```

```
current.asrt <- changeTerms(current.asrt, dropFixed = "WithinColPairs",
                            label = "Drop withinColPairs", IClikelihood = "full")
```

```
WARN [2025-11-08 00:38:00] Some components changed by more than 1% on the last iteration
```

```
Warning in asreml(fixed = yield ~ WithinColPairs + Variety, random = ~Rep/(Row + : Some components
changed by more than 1% on the last iteration
```

```
WARN [2025-11-08 00:38:00] Some components changed by more than 1% on the last iteration
```

```
Warning in asreml(fixed = yield ~ WithinColPairs + Variety, random = ~Rep/(Row + : Some components
changed by more than 1% on the last iteration
```

```
WARN [2025-11-08 00:38:01] Some components changed by more than 1% on the last iteration
```

```
Warning in asreml(fixed = yield ~ Variety, random = ~Rep + units + Rep:Row + : Some components
changed by more than 1% on the last iteration

WARN [2025-11-08 00:38:01] Some components changed by more than 1% on the last iteration

Warning in asreml(fixed = yield ~ Variety, random = ~Rep + units + Rep:Row + : Some components
changed by more than 1% on the last iteration
```

```
print(current.asrt, which = "testsummary", omit.columns = "p")
```

```
####  Sequence of model investigations for yield

(If a row has NA for p but not denDF, DF and denDF relate to fixed and variance parameter numbers)

                terms DF denDF      AIC      BIC         action
1       Maximal model 26     7 1647.194 1746.545 Starting model
2 Drop withinColPairs 25     7 1645.326 1741.666  Changed fixed
```

So the same values of the information criteria have been obtained as when `infoCriteria.list` was used on a `list` containing the `asreml` objects for the two models. The differences is that here there is ultimately only one fitted model, the model stored in the `asreml` object in the `asrtests` object named `current.asrt`: this is the model with `withinColPairs` omitted.

Note this use of the `omit.columns` argument from `print.test.summary` to omit the irrelevant column `p` from the `test.summary`.

## Drop nugget term

```
current.asrt <- changeTerms(current.asrt, dropRandom = "units",
                            label = "Drop units", IClikelihood = "full")
```

```
WARN [2025-11-08 00:38:01] Some components changed by more than 1% on the last iteration

Warning in asreml(fixed = yield ~ Variety, random = ~Rep + units + Rep:Row + : Some components
changed by more than 1% on the last iteration

WARN [2025-11-08 00:38:01] Some components changed by more than 1% on the last iteration

3          Drop units 25     6 1650.115 1743.445                  Changed random
4 Row autocorrelation 25     5 1660.788 1751.107 Changed residual - old uncoverged
```

# 4. Using information criteria to decide model changes

This sections illustrates the use of `changeModelOnIC.asrtests` to decide between consecutive models in a sequence of models. The default information criterion to use for this is the `AIC`. However, `which.IC` can be used to specify the use of the `BIC` or `both`. Here we use the `AIC` and the `full` likelihood.

## Check the term for within Column pairs (a post hoc factor)

As before, we start with the maximal model, in which the variance components have been unconstrained and look to decide whether of not to drop the `withinColPairs` term.

```
current.asrt <- as.asrtests(max.asrt$asreml.obj, NULL, NULL,
                            label = "Maximal model", IClikelihood = "full")
```

```
Warning in asreml(fixed = yield ~ WithinColPairs + Variety, random = ~Rep/(Row + : Log-likelihood
not converged
```

```
current.asrt <- iterate(current.asrt)
```

```
WARN [2025-11-08 00:38:03] Some components changed by more than 1% on the last iteration
```

```
Warning in asreml(fixed = yield ~ WithinColPairs + Variety, random = ~Rep/(Row + : Some components
changed by more than 1% on the last iteration
```

```

```

```
Warning in asreml(fixed = yield ~ WithinColPairs + Variety, random = ~Rep/(Row + : Some components
changed by more than 1% on the last iteration
```

```
current.asrt <- changeModelOnIC(current.asrt, dropFixed = "WithinColPairs",
                                label = "withinColPairs",
                                IClikelihood = "full", which.IC = "AIC",
                                allow.unconverged = FALSE)
```

```
WARN [2025-11-08 00:38:04] Some components changed by more than 1% on the last iteration
```

```
Warning in asreml(fixed = yield ~ WithinColPairs + Variety, random = ~Rep/(Row + : Some components
changed by more than 1% on the last iteration
```

```
WARN [2025-11-08 00:38:04] Some components changed by more than 1% on the last iteration
```

```
Warning in asreml(fixed = yield ~ WithinColPairs + Variety, random = ~Rep/(Row + : Some components

Warning in asreml(fixed = yield ~ Variety, random = ~Rep + units + Rep:Row + : Some components
changed by more than 1% on the last iteration
```

```
print(current.asrt, which = "testsummary", omit.columns = "p")
```

```
####  Sequence of model investigations for yield

(If a row has NA for p but not denDF, DF and denDF relate to fixed and variance parameter numbers)

           terms DF denDF         AIC         BIC         action
1  Maximal model 26     7 1647.193601 1746.544565 Starting model
2 withinColPairs -1     0   -1.874126   -4.884762        Swapped
```

Given the warning about a lack of convergence, we use `iterate.asrtests` to perform additional iterations of the fitting process. It seems that it was successful.

It can be seen from the `test.summary` that the term has been swapped out and this has the effect of reducing the number of fixed parameters by one and makes no change to the variance parameters.

## Check the nugget term

```
current.asrt <- changeModelOnIC(current.asrt, dropRandom = "units",
                                label = "units", IClikelihood = "full",
                                allow.unconverged = FALSE)
```

```

```

The `test.summary` shows us that the model without the autocorrelation failed to converge and so no change was made to the model. It, and the messages from checking the Column autocorrelation, also show us that the omission of the Column autocorrelation resulted in the Row autocorrelation becoming bound. That is, dropping the Column autocorrelation resulted in the dropping of two variance parameters

The function `printFormulae.asreml` is used to display the fitted model.

```
printFormulae(current.asrt$asreml.obj)
```

```
#### Formulae from asreml object

fixed: yield ~ Variety
random: ~ Rep + units + Rep:Row + Rep:Column
residual: ~ ar1(Row):ar1(Column)
```
